# NCV-2 Capability Taxonomy

Description

The NCV-2 Product models capability taxonomies. The view presents a hierarchy of capabilities. These capabilities may be presented in context of an Enterprise Phase, for example, it can show the required capabilities for current and future enterprises.

Implementation

NCV-2 can be represented using a NCV-2 diagram which is based on the UML Class diagram.

> ⚠ If your project has migrated from any earlier than 17.0.1 version, the oldNCV-5 View representation based on the UML Class diagram is loaded as the NCV-2 Capability Taxonomy diagram.
