

Creating NSV-7 Typical table

The NSV-7 Product consists of two tables:

1. NSV-7 Typical table.
2. NSV-7 Actual table.

You must create a NSV-7 Typical table first before creating a NSV-7 Actual table.

To create NSV-7 Typical table, either

- Add a new Measurement Set by clicking the **Create New Measurement Set** button and select an owning element for the Measurement Set, and then specify the Measurements and Resources to be measured in the table cells.
- Add the existing Measurement Sets by clicking the **Add Existing Measurement Set** button and select existing Measurement Sets from the model.

- You can remove Rows (Measurement Sets) from the model or table, order, or export them to a CSV or HTML format.
- Right-click on a cell to see more menus.
- The created instances are stored in the same location as the Typical Measurements table.
