

NSV-6 Systems Data Exchange Matrix

Description

The NATO Systems Data Exchange Matrix specifies the characteristics of the system data exchanged between systems. The focus is on data crossing the system boundary. An NSV-6 focuses on the specific aspects of the system data flow and the system data content in a tabular format.

The term System Data Exchange does not refer to one NMM element. A data exchange as described in NSV-6 is a combination of a System Port Connector and the Data Elements

Implementation

that flow across it. Any properties shown in an NSV-6 table will be properties of the System Port Connector.

NSV-6 can be represented using:

- NSV-6 table.
- NSV-6 role-based table.

A role-based table represents exchanges between Resource Roles(resource usages).

- NSV-6 spreadsheet report.

Sample

#	Resource Interaction Item	Sending Resource	Receiving Resource	Producing Function	Consuming Function
1	Distress Signal	Distress Beacon	ESM System	Transmit Distress Signal	Receive Distress Signal
2	Message	Voice Radio	Voice Radio	Broadcast Message	Receive Message
3	TDM	Link 16 Terminal	Link 16	Send TDM	Receive TDM
4	TDM	Link 16	Link 16 Terminal	Send TDM	Receive TDM
5	Track	ESM System	Link 16 Terminal	Send Track Information	Receive Track Information
6	Track	ESM System	Link 16	Send Track Information	Receive Track Information

Systems Data Exchange Matrix

Related views

NSV-6 is the physical equivalent of the logical NOV-3 table and provides detailed information on the system connections which implement the information exchanges specified in an NOV-3.
