

# Creating NTV-1 table

To create a NTV-1 table, do either

- Add a new UAF Element by clicking the **Add new UAF Element** button and select any UAF Element (this term means any of the UAF available elements). Specify the owner for the selected element.
- Add the Existing UAF elements by clicking the **Add Existing UAF Element** button and select the UAF elements.
- Assign one or more Standards or Protocols to each row that the particular UAF element must conform to by clicking the ... button on any cell in the **Standard/Policy** column.

- You can remove Rows (UAF Elements) from the model or table, order, or export them to a CSV or HTML format.
- Right-click on a cell to see more menus.
