Common SQL element properties

These properties are common and available for all SQL model elements in their Specification windows.

Property name	Description
Name	Name of this SQL model element.
Label	Label of SQL model element. Can be used for various referring purposes (both human and code referral).
Description	Longer text, describing this SQL element in more detail.
TODO	Additional remarks about the further modifications, necessary for this element.

In addition to these SQL properties, some common, useful UML model properties are shown in the Specification windows (only in the Expert mode).

Property name	Description
Qualified Name	Fully qualified name of this model element - names of all owning parent elements and this element, concatenated using "::" separators.
Owner	Model element, directly owning this element.
Applied Stereotype	Stereotypes, applied on this model element, extending element data over and above the standard UML functionality. SQL extension stereotypes can be seen here (implementing SQL model features, described in this document) as well as any additional extensions.
Image	Custom image can be set on each model element if necessary.
