

MinLength

Maps to a UML Attribute with the stereotype XSDminLength. The name and type of such an attribute do not make sense.

- value – to Attribute initial value.

minLength XML representation summary

```
<minLength
  fixed = Boolean : false
  id = ID
  value = nonNegativeInteger
  {any attributes with non-schema namespace...}>
  Content: (annotation?)
</minLength>
```

minLength XML code sample

The following is the definition of a user-derived datatype which requires strings to have at least one character (i.e., the empty string is not in the value space of this datatype).

```
<simpleType name='non-empty-string'>
  <restriction base='string'>
    <minLength value='1' />
  </restriction>
</simpleType>
```
