

Installing TWCloud on Linux

This section provides the method to install Teamwork Cloud (TWCloud) using the installer file and the zip file.

- [Installing TWCloud and TWCloud Admin using the installer file on Linux](#)
- [Installing TWCloud using the zip file on Linux](#)

Warning

- A single server or a single node can serve a limited number of users with a limited storage and limited performance.
- You need a static IP address for the server if you want to install TWCloud on a single server.
- An evaluation TWCloud license cannot be installed on same server where other MagicDraw's floating licenses are located. Therefore, to evaluate TWCloud a separate floating license server should be used.
