

Editing LDAP server configuration properties

You can change the configuration properties of LDAP server connected to the Teamwork Cloud (TWCloud) system. The system will update the configuration properties with the new values automatically

To edit the configuration properties of LDAP server do one of the following

- On the **LDAP management** page, click an LDAP server which you want to edit, **LDAP configuration** pane opens.
 - select which configurations (LDAP configuration, Encryption or Authentication) you want to do and click **Edit**.
 - After you complete editing, click **Save**, to save changes.
- Select LDAP server which you want to edit, click , from the list select what you want to edit.
 - After you complete editing, click **Save**, to save changes.
