

Tracking unlinked requirements

Suspect links analysis allows tracking unlinked requirements. This is useful when you're working with structure elements and you need to know which requirements remain unsatisfied.

To check whether unlinked requirements are satisfied

1. In the main toolbar, go to **Analyze > Suspect Links** and select **Options**.
2. Click the right column next to the **Track Unlinked Requirements** property group and choose:
 - a) **All** – if you want to track all the unlinked requirements
 - b) **Excluding Owning** – if you want to track only those unlinked requirements, that have no sub-requirements
 - c) **None** – if you want to disable tracking unlinked requirements.

3. Click **OK**.

All unlinked requirements are provided in the **Validation Results** panel.

The image shows the 'Validation Results' panel with a table of validation errors. The table has columns for Element, Severity, Abbreviation, Message, and Is Ignored. There are four rows of warnings related to unlinked requirements.

Element	Severity	Abbreviation	Message	Is Ignored
ValSuite - Suspect Links				
SR.2 Regenerative Braking	warning	UnlinkReq	An unlinked element was found.	Not Ignored
SR.3.1 Stopping Distance	warning	UnlinkReq	An unlinked element was found.	Not Ignored
SR.3.2 Friction Brake Heating	warning	UnlinkReq	An unlinked element was found.	Not Ignored
SR.4 ACC Brake	warning	UnlinkReq	An unlinked element was found.	Not Ignored
