

Project Properties dialog

The **Project Properties** dialog provides general information about a project. You can add a title, author, version, and project description using this dialog.

To open the **Project Properties** dialog

1. Open the project.
2. Select the **Project Properties** command from the **File** menu.

Project Properties

Opened project properties
Review and set basic project properties of the opened project.

General Information

Project: use case diagram.mdzip [C:\MD\MagicDraw_190beta_no_install_09_06\samples\diagrams]
File Size: 0.23 MB
Created: 9/13/2005 9:39 AM Last Modified: 9/6/2017 1:15 PM

Related Information

Title: Author: No Magic, Inc.
Version: -1

Project Description

An example of a use case diagram.

☒ More OK Cancel Help

 **Title**
The project title is assigned as a value of the project [Documentation](#) property.

To specify compatibility range

1. Enter the **Version** value.
2. Enter the **Compatible with**. The value must be less or equal to **Version** value.
3. Click **OK** after you are done.

 **Compatible With**
Compatible With defines compatibility range between two Standard/System profile versions. Once specified, it helps to avoid read-only constraints in TWCloud projects in cases client uses earlier profile versions locally compared to those used in the server project.

When the **Version** of the Standard/System profile on the user's computer is earlier (e.g. 19.0 SP1) than the **Version** of this profile on TWCloud (e.g. 19.0 SP3), but higher or equal to the value of **Compatible with** (e.g. 19.0), the user will still be able to edit TWCloud projects using the profile.

To use advanced options

1. Click **More** to see more options:
 - Review project statistics in the **Statistics** tab.
 - See the list of shared packages in the **Shared Packages** tab. In this tab you can:

- Define a preferred path to the particular package. Click the ... button [to select the package](#) in the **Preferred Path** value box.
- Set the project as a standard/system profile. Select the **Standard/System Profile** check box for this.

 **Note**
The **Shared Packages** tab is available for local projects only.

- The **Used Projects** tab shows the projects and standard/system profiles used in the open project. Click the **Open Project Usages** button to open the [Used Projects dialog](#), where you can modify project usages.
- The **Advanced** tab shows project meta information. In this tab you can:
 - Reset all project element IDs. All project elements have their own ID (a unique identifier). While working with several related projects, you may receive a message about duplicated element IDs. After clicking the **Reset IDs** button, new IDs will be created for all project elements.

 **Note**
Make sure the project you are resetting IDs for is not used in other projects.

- Reset the project ID. After clicking the **Reset Project ID** button, new IDs are created for the project.

 You cannot reset the project ID for server projects.
