

Configuring shortcut menus of a row or column header element and a filter panel

To add a custom command to the shortcut menu of the row or column header element, or to the one of the filter panel, use the [com.nomagic.magicdraw.dependencymatrix.configuration.DependencyMatrixActionRegistry](#) class.

The [com.nomagic.magicdraw.dependencymatrix.configuration.DependencyMatrixAMConfigurator](#) interface has a single method that adds custom commands. The location of a new command depends on the parameters, such as the following:

- If the collection of elements is empty, the command will be added to the shortcut menu of the filter panel.
- If the collection of elements is not empty and *forRow* is *true*, the command will be added to the shortcut menu of the row header element.
- If the collection of elements is not empty and *forRow* is *false* the command will be added to the shortcut menu of the column header element.
