

SvcV-2 Services Resource Flow Description

Description

A SvcV-2 specifies the Resource Flows between Service Specifications and may also list the protocol stacks used in connections.

A SvcV-2 DoDAF-described Model is used to give a precise specification of a connection between Service Specifications. This may be an existing connection or a specification of a connection that is to be made for a future connection.

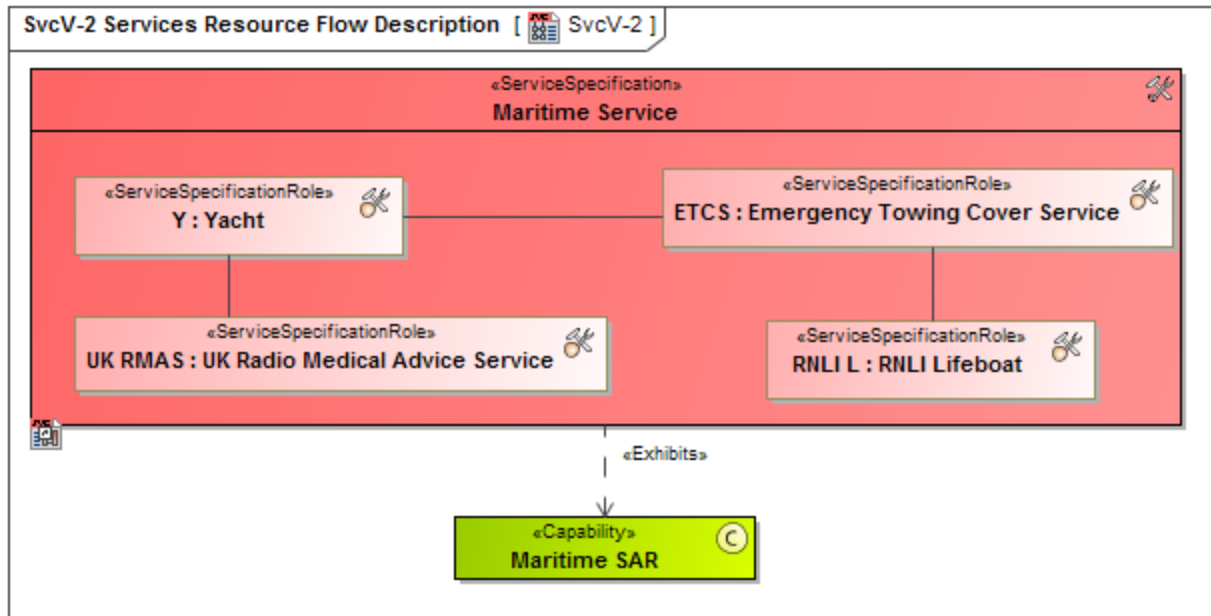

The intended usage of the SvcV-2 includes:

- Resource Flow specification.

Implementation

SvcV-2 can be represented using:

- SvcV-2 diagram which is based on the UML Class diagram.
- SvcV-2 Internal Block diagram which is based on the UML Composite Structure diagram.

Any protocol referred to in a SvcV-2 diagram needs be defined in the [StdV-1 Standards Profile](#).
