

Working with Services Parametric diagram

Description

A Parametric diagram includes the usage of a [Constraint Block](#) to constrain the properties of another Service Specification. It contains [Constraint Properties](#) and Constraint Parameters as well as other properties (Service Specification Role or Measurements) from within that internal Service Specification context. All properties displayed, other than the constraints themselves, must either be bound directly to a Constraint Parameter or contain a property that is bound to a Constraint Parameter (through any number of containment levels). A Constraint Block generally contain many constraints, each of them containing many Constraint Parameters.
