

# Tracing migration problems

You can select automatic marking of problematic elements during the conversion process.

All recognized data mapping or other migration problems will be marked by adding a **ToDo** tagged value with the problem description into the problematic element.

## To trace marked elements

First, try to avoid the cases described previously.

If data loss cannot be avoided, all problems, conflicts, and data loss occurrences are registered to the model element's **ToDo** tags on project load:

1. Load your project. The warning message appears.
2. Click **Yes**. Warnings are displayed in **ToDo** tags.
3. Double-click the element or, from the shortcut menu, choose **Specification**. Information about changes is added to the **ToDo** field in the **General** tab.

Use the **Find ToDo** feature to search for elements containing **ToDo** information. From the **Tools** main menu, choose **Find ToDo**.
