# Manifestations

An artifact embodies or manifests a number of model elements. It owns the manifestations, each representing the utilization of a packageable element.

To create the manifestations, simply draw the Manifestation link from an artifact to a component.

To display the manifested artifacts on the component shape

- On the diagram pane, select the component shape, click the Compartments button, and from the list, select **Artifacts**.
- In the component **Symbol Properties** dialog, cancel the selection of the **Suppress Artifacts** check box.
