

Saving projects

The model must be saved in XML since it is the only format accepted by the translator.

 The native modeling tool format is **.mdzip* and **.mdxml*. You can also save projects as **.xml* and **.xml.zip*.

To save changes for later sessions, projects must be saved. While saving, you can edit the name of the project and its file format.

To save the project

1. From the **File** menu, select **Save Project** or **Save Project As**. Alternatively, you can click the **Save** button on the main toolbar or press the shortcut keys Ctrl + S. The **Save** dialog opens.
2. Select the destination directory (where you want the project to be saved) and type the chosen file name.

 The default project saving location is set according to your operating system:

- **Windows:** My Documents/
- **Linux:** /home/<username>/
- **OS X:** Users/Documents/

3. Select the format for saving a project:

- Packed MagicDraw File Format (**.mdzip*) (default). **.mdzip* is a MagicDraw native format. It contains various parts of the project compressed. You should select it if you intend to work with the project only in the MagicDraw environment.
- MagicDraw File Format (**.mdxml*). You should choose it if you intend to analyze the project's structure, xml, or for other purposes. You can open **.mdxml* projects with other UML tools as well.
- XML (**.xml*). It is the same file format as **.mdxml*, only that **.mdxml* files can be opened with MagicDraw or other UML tools, whereas **.xml* files can only be opened with an XML editor.
