

# Choosing where to store the published project

When configuring settings for publishing your project to Cameo Collaborator, you must specify the place in the server repository where you wish to store the published project. Before choosing the place, consider the way you're going to share the published project with reviewers.

If you are going to...	Publish it to...
Provide a <i>private</i> link to the published project	<ul style="list-style-type: none"><li>Repository/Shared (1)</li><li>Repository (2)</li></ul>
Provide a <i>public</i> link to the published project	Repository/Guest Home (3)
Collaborating in Alfresco sites	Repository/Site (4)
<div style="border: 1px solid orange; padding: 5px; margin: 5px 0;">⚠ This site must be already created!</div> For more information, refer to <a href="#">Creating a site in Alfresco Community</a>	Repository/Shared (1)

You can also create a folder in any of these places and publish your project right there. For this, you need to specify the exact path to that project in the **Cameo Collaborator Publisher** dialog.

The following figure shows where you can find the published project in each case (places in the preceding table and in the figure are marked with appropriate numbers).

To open the *Repository* folder (2)

- On the menu at the top of the page, click **Repository**.

To open the *Shared* folder (1)

---

- Do either:
  - On the menu at the top of the page, click **Shared Files**.
  - On the menu at the top of the page, click **Repository** and then on the left side of the **Repository Browser** page, click **Shared**.

To open the *Guest Home* folder (3)

---

- On the menu at the top of the page, click **Repository** and then on the left side of the **Repository Browser** page, click **Guest Home**.

To open a site (4)

---

- On the menu at the top of the page, click **Sites**, then point to **Favorites** and select the site name.
