# Releasing locked elements

A user can lock elements in a modeling tool. The element locks can be managed in two applications: Resources and Users. Users with a **Release Lock** per mission can release all locks of the resource.

To release locked elements

1. Navigate to Users application. Do one of the following:
   - Click ⋮ next to resource, and choose to **Release locked elements**.
   - Click user and in **User** pane, click ⋮ and choose to **Release locked elements** .

   > ✓ You can use locked element filter to search for elements according to resource name or branch name.

2. **Release locked elements** opens. Select elements.

   > ⚠ **Unlocking project elements in a branch**
   >
   > If a project is locked in different branches, releasing lock(s) on a branch will not release other locks in the other branches.

3. Click the **Unlock** button.
