

# Installing Web Application Platform on Windows

On this page

- [Installation for production use](#)
- [Installation for testing purposes](#)
- [Changing Web Application Platform property values](#)

The content of this page is intended for system administrators. Here you can learn how to install and configure Web Application Platform with Cameo Collaborator and Resource Manager and TWCloud Admin plugins developed by No Magic.

## Installation prerequisites

To install the Web Application Platform with plugins, you need to:

- Have a working instance of [Teamwork Cloud](#).
- Make sure that [the FlexNet license server is installed](#) beforehand because Cameo Collaborator for Teamwork Cloud uses a floating license.

## Installation for production use

You will need to specify license server details when installing Web Application Platform.

### Read before starting!

- Web Application Platform and Teamwork Cloud should be installed on different machines.
- Before installing Web Application Platform, make sure you know Teamwork Cloud, Authentication server and FLEXnet server data, such as the host name (or IP address) and port. You will need to enter this data during installation.

To install the Web Application Platform for production use

- After installing Web Application Platform, it is recommended to disable the web container (e.g., Apache Tomcat) on the machine where

1. Run the `Web_App_Platform_<version number>_win64.exe` file as an administrator to start the installation wizard.
2. Read the license agreement and select the **I accept the terms of the Licence Agreement** check box. Then click **Next**.
3. Specify the location where you want to install the Web Application Platform:
  - Use the default location suggested in the **Where would you like to install?** box.
  - Click **Choose** and select a location on your machine.
4. Click **Next**.
5. Select the **Advanced Install** radio button and click **Next**.
6. Select the check boxes next to the plugins you want to install and click **Next**.

### Tip

Click the plugin name to read its description on the bottom of the installation wizard or the read the plugin documentation listed below:

7. Specify the Teamwork Cloud host name (or IP address) and port in the appropriate boxes.
  - [Cameo Collaborator for Teamwork Cloud](#)
  - [Resources](#)

### Example

Host name/IP: 127.0.0.1

8. If your Teamwork Cloud instance does not use SSL certificates, clear the **SSL** check box. Otherwise, leave the checkbox selected.
9. Click **Next**.
10. Specify the Authentication server host name (or IP address), port, and the password to be used by the authentication client (the **Client secret**) in the appropriate boxes.

### Example

Host name/IP: 127.0.0.1

11. If your Authentication server instance does not use SSL certificates, clear the **SSL** check box. Otherwise, leave the checkbox selected.
12. Click **Next**.
13. Specify the FLEXnet server host name (or IP address) and port in the appropriate boxes. Then click **Install**.

### Example

Host name/IP: 127.0.0.1

14. When you get the notification that Web Application Platform is successfully installed, click **Next**.
15. If you do not want to start Web Application Platform after exiting the installation wizard, clear the **Start Web Application Platform as service** checkbox. Otherwise, leave the checkbox selected.
16. Click **Done**.
17. When the installation is finished, update the **authentication.redirect.uri.whitelist** property in the `authserver.properties` file by adding the Web Application Platform address `http(s)://<domain_name>/webapp` as its value.
18. [Apply the Cameo Collaborator for Teamwork Cloud license](#).

Web Application Platform is now installed with the selected plugins and started if you choose this option in step 15. If you need to start the Web Application Platform manually, click [here](#) to learn how to do it. To access Web Application Platform, open a web browser and go to `http(s)://<domain_name>:<port>/webapp/resources`. By default, the Web Application Platform uses the port 8443.

## Installation for testing purposes

If you want to install Web Application Platform for testing purposes only, you have to install it on the same machine where Teamwork Cloud and Authentication servers are installed. You can do it in two different ways:

- Integrate the Cameo Collaborator plugin to Web Application Platform that was installed together with Teamwork Cloud. [Learn how to manually integrate plugins to Web Application Platform](#). Note that you need to integrate the Cameo Collaborator plugin only. Resources and TWCloud Admin plugins are installed together with Teamwork Cloud.
- Run the `Web_App_Platform_<version number>_win64.exe` file and choose the Quick Install option.

This section explains how to install Web Application Platform using the executive file (the second option described above). It installs the platform using default property values. You can [change](#) these values later if needed.

### Read before starting!

- If you want to install the Web Application Platform only for testing purposes (**Quick Install** option), you have to install it on the same machine where Teamwork Cloud and Authentication servers are installed.

• After installing Web Application Platform, it is recommended to disable the web container (e.g., Apache Tomcat) that was installed together with Teamwork Cloud.

1. [Stop Web Application Platform](#) on the machine where Teamwork Cloud is running.
2. Run the `Web_App_Platform_<version number>_win64.exe` file to start the installation wizard.
3. Read the license agreement and select the **I accept the terms of the Licence Agreement** check box. Then click **Next**.
4. Specify the location where you want to install the Web Application Platform:
  - Use the default location suggested in the **Where would you like to install?** box.
  - Click **Choose** and select a location on your machine.
5. Click **Next**.
6. Select the **Quick Install** radio button and click **Next**.
7. When you get the notification that Web Application Platform is successfully installed, click **Next**.
8. If you want do not want to start Web Application Platform after exiting the installation wizard, clear the **Start Web Application Platform as service** check box.
9. Click **Done**.
10. When the installation is finished, update the `authentication.redirect.uri.whitelist` property in the `authserver.properties` file by adding the Web Application Platform address `http(s)://<domain_name>/webapp` as its value.

Web Application Platform is now installed with Cameo Collaborator, Resources and TWCloud Admin plugins. If you need to start the Web Application Platform manually, click [here](#) to learn how to do it. To access Web Application Platform, open a web browser and go to `http(s)://<domain_name>:<port>/webapp/resources`. By default, the Web Application Platform uses the port 8443.

## Changing Web Application Platform property values

After installing the Web Application Platform, you can change its property values in the `webappplatform.properties` file. Click [here](#), to learn more about each property.

To change Web Application Platform property values

1. Go to the `<wap_installation_directory>\apache-tomcat\shared\conf` directory.
2. Open the `webappplatform.properties` file.
3. Change the desired property values.
4. Save and close the file.
5. Restart the Web Application Platform.
