

# Magic Software Architect Documentation

This is the home page of Magic Software Architect documentation.

Magic Software Architect is based on the award-winning MagicDraw modeling platform. The solution retains all the best diagramming, collaboration, persistence, and documentation capabilities while offering more customized capabilities tailored to **software engineering** needs.

The documentation of Magic Software Architect is a package that includes the documentation of these capabilities:

## Installation and licensing

Provides the instructions about how to install modeling tool and plugins, add or remove licenses, perform activation.

## General capabilities

Introduces the main features of modeling tool: working with projects, UML 2 modeling and diagramming, collaboration capabilities, and many more core features.

## Data modeling

Provides data-related modeling, it includes entity-relationship, database and XML schema modeling features. Data modeling is enabled/disable by the user.

## CSV import

The CSV Import plugin for modeling tool allows you to import values in a comma separated values file into your modelling tool and create model elements, diagrams and relationships from that data. CSV import is enabled /disable by the user.

## Excel import

The Excel import plugin is a useful tool, designed to
