

Specifying file export paths

Before exporting a model to an OWL ontology, you need to specify the file export path. The **fileExportPath** property allows you to store the file export path as a tagged value in your Concept Modeling package.

To specify a file export path to export a model to an OWL ontology

1. Right-click on a concept model that you want to export, and select **Specification**. The **Specification** window opens.
2. On the left column, select **Tags**.
3. In the tree structure, do one of the following:
 - Double-click **fileExportPath**.
 - Select **fileExportPath** and click **Create Value**.

4. The **Value** box appears on the right side of the dialog.
5. In the **Value** box, specify the export path.
6. Click **Close**.
