OSLC support

Since Cameo DataHub 18.1, DataHub has begun implementing features to support OSLC interactions. Open Services for Lifecycle Collaboration (OSLC) is a community standardizing the way that life cycle tools work together. With support for OSLC, DataHub can easily communicate with other software such as IBM® Rational® DOORS® Next Generation, which also supports OSLC integration. Therefore, you can share and use linked data, analyze, track, and explore them via OSLC links between DOORS Next Generation artifacts and DataHub data nodes.

DataHub supports the following

- OSLC Link support for IBM® Rational® DOORS® Next Generation
- OSLC Query support for IBM® Rational® DOORS® Next Generation
