

# Creating aliases

You can create aliases in DOORS to be displayed in MagicDraw®. If you create the alias through the DOORS **database** menu, DataHub uses the current location as the root node. Alternatively, if you create the alias through the DOORS **Formal Module** menu, DataHub uses the current module as the root node in the [Alias Explorer](#).

## Note

You can see and [work with the created alias](#) from DOORS only in MagicDraw®.

To create an alias in DOORS

---

- On the DOORS main menu, click **DataHub > Create Alias from Current Location** to create an alias.
