

Data Source synchronization

You can synchronize a Data Source by selecting it and clicking either the **Synchronize** button on the **DataHub Explorer** toolbar or by choosing the **Synchronize** menu item from the shortcut menu.

To synchronize an entire Data Source, do one of the following

- Select a Data Source in the **DataHub Explorer** tab and click the **Synchronize** button on the **DataHub Explorer** toolbar.

- Right-click a Data Source and select **Synchronize > Synchronize Node** or **Synchronize Node Recursively** to synchronize all items that have D HLinks within the selected Data Source.

Information

The **Synchronize** button in DataHub Explorer is enabled only when you select a node or a Data Source.
