Changes for Security Control

The new approach for modeling the Security Control (and its specialization) is based on Requirements. The profile changes are described in the following table:

Before migration		After migration		Comment
Name	**Type**	**Name**	**Type**	
Security Control	Activity	Security Control	Class	Aditionally, Security Process is created to overtake the information, that cannot be stored in Security Control [Class].
Security Control Family	Comment	Security Control Family	Class	The Criterion from SecurityControlFamily [comment] is moved to the Text of the SecurityControlFamily [class, requirement]. Information about the Annotated Element is moved to ToDo.
Enhanced Security Control	Activity	Enhanced Security Control	Class	Aditionally, Security Process is created to overtake the information, that cannot be stored in Security Control [Class].
Security Control Action	Call Behavior Action	Security Process Action	Call Behavior Action	
-	-	Security Process	Activity	Security Process is a new element dedicated for modeling security behaviors.
