

Selecting Environment

The **Environment Selection** dialog opens when starting the UAF plugin for the first time.

To select the enterprise architecture framework environment

1. Select the environment according to the architecture you are going to build:

- UAF Enterprise Architecture
- UAF
- DoDAF 2.0
- MODAF
- NAF v. 3
- NAF 4.0
- BPMN
- SysML
- DoDAF 1.5
- TOGAF

Read the brief descriptions of each enterprise architecture framework provided in the dialog. This information may help you decide what to choose.

2. Click to select the **Expert** check box, if you want the user interface to be complex and have all details exposed. And if you are a new user, leave the **Expert** check box empty.
3. Click the **Continue** button. The sample project corresponding the selected enterprise architecture framework will be opened (only if using Cameo Enterprise Architecture tool).

For information about changing the environment, see [Converting model between Enterprise Architecture Frameworks](#).
