

Creating OV-6a table

To create an OV-6a table, do one of the following

- Add a new Operational Constraint by clicking the **Add New** button. The new row is added in table. Fill in three columns:
 - **Applies To**. Select the cell and click . In the **Select Subject Of Operational Constraint** dialog, select constrained Operational Elements (Operational Performer, Operational Activity, Information Element, Operational Exchange).
 - **Rule Specification**. Select the cell and click . In the **Specification** dialog, select the language and specify body with an expression that can be written in natural or technical language (for example English or OCL).
 - **Rule Kind**. Click the cell and from drop-down list select the rule kind.
- Add an existing Operational Constraints by clicking the **Add Existing** button. In **Select Operational Constraint** dialog, select Operational Constraints. The filled row is added in table.
