

Sr Service Roadmap

Description

The Sr Services Roadmap domain shows the service specification changes over time. It provides an overview of how a service specification changes over time. It shows the combination of several service specifications mapped against a timeline. The Sr Services Roadmap domain presents a whole lifecycle view of resources (services), describing how it changes over time. It shows the structure of several resources mapped against a timeline.

In addition, this model is useful in support of net-centric (service-oriented) implementation of services. This model can present a timeline of services evolve or are replaced over time, including services that are internal and external to the scope of the architecture.

The intended usage of the Sr Services Roadmap domain includes:

- Development of incremental acquisition strategy.
- Planning technology insertion.

Implementation

The Sr Services Roadmap domain is represented by a Services Roadmap diagram which is realized as a time based diagram.
