

# Realized Operational Exchange wizard

The **Realized Operational Exchange** wizard gives the instructions to follow when adding a new Operational Exchange or selecting one of the existing Operational Exchanges.

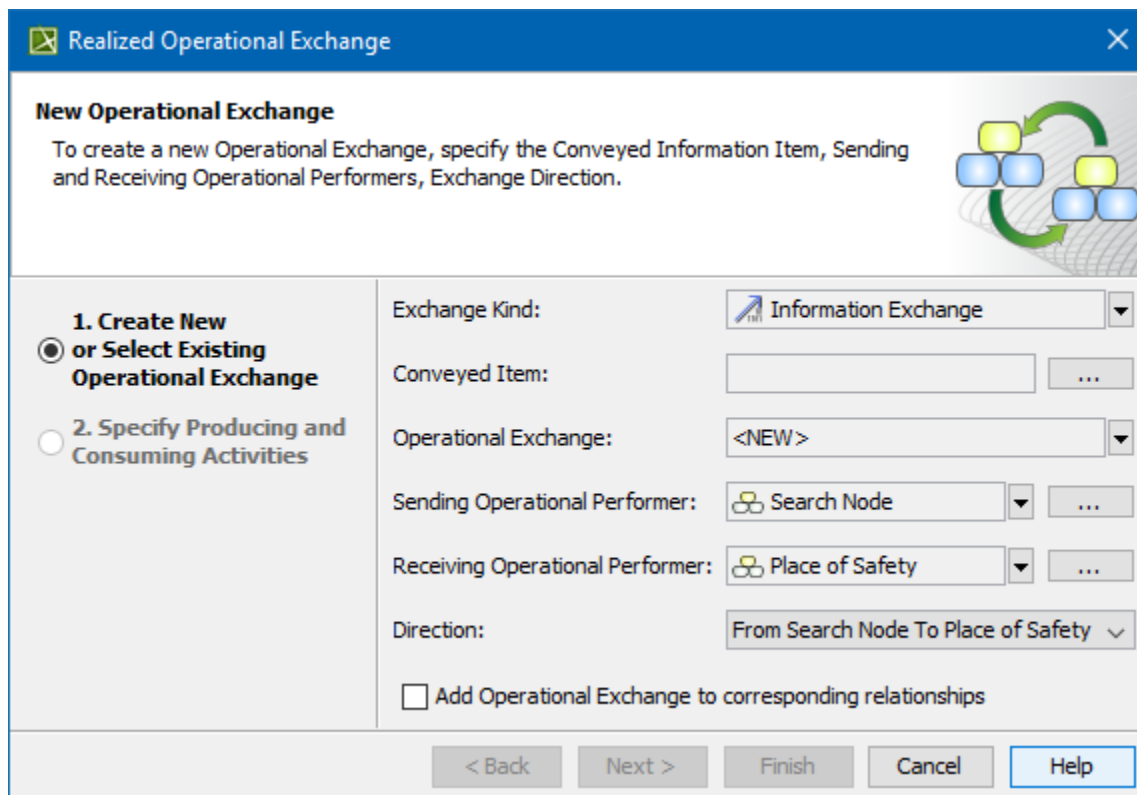

The **Realized Operational Exchange** wizard includes of two steps:

- 1 [Operational Exchange creation \(mandatory\)](#)
- 2 [This step is designed to specify Producing and Consuming Activities for the created or selected Operational Exchange. Operational Exchanges are produced and consumed by Activities acting under the Nodes Producing and Consuming Activities specification \(optional\)](#)

## Operational Exchange creation (mandatory)

This step is designed to create a new Operational Exchange by specifying a Conveyed Item, both sending and receiving Operational Performer and a direction of an Operational Exchange. Depending on a fact, if selected Operational Performer is known or not, requested information differs:

- If sending and receiving Operational Performers are unknown from the wizard invocation context, you need to specify both.

- If sending and receiving Operational Performers are known, they are added to a **Realized Operational Exchange** wizard automatically.

Realized Operational Exchange

### New or Existing Operational Exchange

To create new Operational Exchange, specify Exchange Type, Conveyed Information Item and Exchange Direction. You can also select existing Operational Exchange from Drop Down List.

☒ **1. Create New or Select Existing Operational Exchange**

☐ **2. Specify Producing and Consuming Activities**

Exchange Kind: Information Exchange

Conveyed Item:

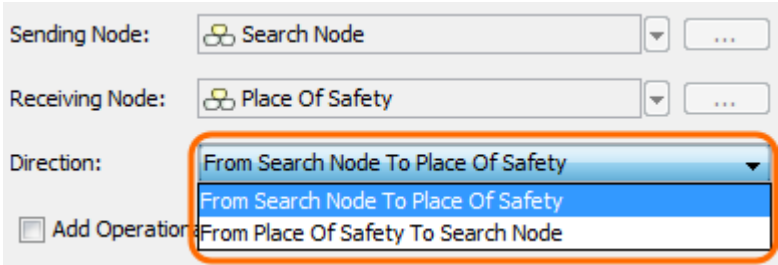

Operational Exchange: <NEW>

Direction: From Search Node To Place of Safety

☐ Add Operational Exchange to corresponding relationships

<b>Operational Exchange</b>	<p>Operational Exchange that specifies an information flow for specified conveyed items.</p> <p>If you select an existing Operational Exchange from the drop-down list, the Conveyed Item and Direction boxes will be filled with corresponding information automatically. You will be able to edit the values of conveyed items.</p> <p>The direction of the information flow won't be editable.</p> <div>  Available if sending and receiving Operational Performers are known from the wizard invocation context. </div>
<b>Sending Operational Performers</b>	<p>Operational Performers that sends the specified conveyed information.</p> <div>  Available if a Operational Performer is unknown from the wizard invocation context. </div>
<b>Receiving Operational Performers</b>	<p>Operational Performers that receives the specified conveyed information.</p> <div>  Available if an Operational Performer is unknown from the wizard invocation context. </div>
<b>Direction</b>	<p>The direction of the information flow.</p>  <p>After changing the direction from the default one, the sending Operational Performer is switched with the receiving Operational Performer. The direction of the Operational Exchange is changed accordingly.</p>
<b>Add Operational Exchange to corresponding relationships</b>	<p>Select the check box, if you want to add the Operational Exchange to corresponding relationships existing in other related diagrams.</p>

This step is designed to specify Producing and Consuming Activities for the created or selected Operational Exchange. Operational Exchanges are produced and consumed by Activities acting under the **Nodes Producing and Consuming Activities specification (optional)**

Realized Operational Exchange

### Specify Producing & Consuming Activities

To specify Producing and Consuming Activities for selected Operational Exchange, select Operational Activities from Drop Down Lists in the table cells.

☐ **1. Create New or Select Existing Operational Exchange**

☒ **2. Specify Producing and Consuming Activities**
