

Service Interface

Description

UPDM: A contractual agreement between two resources that implement protocols through which the source service interacts to the destination resource. A physical connection between two resources that implements protocols through which the source resource can transmit items to the destination resource.

MODAF/NAF: The mechanism by which a Service communicates.

DoDAF: An overlap between Performers for the purpose of producing a Resource that is consumed by the other (DoDAF::Interface).

SOAML: Defines the interface to a Service Point or Request Point and is the type of a role in a service contract.

Architecture Framework

DoDAF, MODAF, NAF

Properties

Property	Description
serviceInteraction : ServiceInteraction[0..1]	A Service interaction.
serviceStateMachine : ServiceStateMachine[0..1]	A Service state machine.
