MODAF. SV-5 Function to Operational Activity Traceability Matrix

Description

The Function to Operational Activity Traceability Matrix (SV-5) addresses the linkage between functions described in an SV-4 and Operational Activities specified in an OV-5. The SV-5 View depicts the mapping of functions (and, optionally, the functional resources that provide them) to operational activities and thus identifies the transformation of an operational need into a purposeful action performed by a system or solution.

Implementation

SV-5 can be represented using a SV-5 diagram which is an editable Dependency Matrix. The Functions will be used as the row elements and the Operational Activities will be used as the column elements.

Sample

SV-5 Function to Operational Activity Traceability Matrix

Related views

An SV-5 addresses the linkage between the functions described in an SV-4 and the Operational Activities specified in an OV-5.
