

# Timer Catching Intermediate Event

## Description

A Timer Catching Intermediate Event acts as a delay mechanism based on a particular time and date, or cycle, for example, on Mondays at 9 A.M.

This Event displays any of the following on a diagram:

- A Timer Catching Intermediate Event name if the name is specified.
- A Time Cycle property name if the name is unspecified.
- A Time Date property if the name and Time Cycle are unspecified.
