# BPMN Processes Structure Map

Description

A BPMN Processes Structure Map diagram allows you to represent the structure of processes in a project. The processes are grouped into packages on the diagram. And each process may itself contains other processes, which in turn may contain other processes. The diagram makes the processes easier to understand and helps you analyze how they are organized.

A BPMN Processes Structure Map diagram shows packages, processes, subprocesses, and tasks from a selected scope.

Example

BPMN Processes Structure Map
