Unique

Maps to a UML Attribute added into some UML Class.

unique mapping to UML attributes

```
<unique
        id = ID
        name = NCName
        {any attributes with non-schema namespace…}>
        Content: (annotation?, (selector, field+))
</unique>
```

For a unique UML model example, see Keyref.
