

WhiteSpace

Maps to a UML Attribute with the stereotype XSDWhiteSpace. The name and type of such an attribute do not make sense.

- value – to Attribute initial value.

WhiteSpace XML representation summary

```
<whiteSpace
  fixed = boolean : false
  id = ID
  value = (collapse | preserve | replace)
  {any attributes with non-schema namespace...}>
  Content: (annotation?)
</whiteSpace>
```

WhiteSpace XML code sample

The following example is the datatype definition for the token built-in derived datatype.

```
<simpleType name='token'>
  <restriction base='normalizedString'>
    <whiteSpace value='collapse' />
  </restriction>
</simpleType>
```
