Static Class

Static classes are classes that are not intended to be instantiated and which contain only static members. When a class declaration includes a static modifier, the class being declared is said to be a static class.

When a class declaration includes a static modifier, the class being declared is said to be a static class.

> **Example**
>
> Code:
>
> ```
> static class A
> {
>         ...
> }
> ```
>
> C# Language Properties to create static class:
