## **Modeling tools licensing**

In this chapter, read about:

The product license is identified by the license key. The license key is a license key file: \*.lic or \*.txt.

There are two main types of licenses: Seat (also known as Nodelock) and Floating (also known as Shareable).

- The Seat license allows using the tool on the particular machine it is installed.
  The Floating license can be shared among a number of users over time.
