Document Modeling Plugin

The Document Modeling Plugin is designed to assist in modeling the document structure. This plugin uses concepts from the OMG SysML standard, familiar to systems engineers. The plugin is designed not only for systems engineers, but also for systems analysts, systems architects, or anyone who needs to model a document structure for a specific project. The Document Modeling Plugin allows you to review a prepared document structure in the document preview dialog and save the document in .pdf, .html, or .xml file formats. The following SysML concepts were used for the document modeling:

- Conform
- Viewpoint
- View
- Expose
