Sharing document links

On this page

- Providing an easy-to-remember link

After a document is published to Cameo Collaborator for Teamwork Cloud, you can share it with reviewers by providing a link to a Cameo Collaborator document.

Sharing a published model is the second step in the workflow for reviewing models and providing feedback.

To get a link to a Cameo Collaborator for Teamwork Cloud document

---

1. Go the Resources application in one of the following ways:
   - In an internet browser, go to *http(s)://<domain_name>:<port>/webapp/resources*.
   - In the app bar of the document portal, click the grid icon and select **Resources**.
2. Go to the category containing the Cameo Collaborator document you want to share.
3. Click the vertical ellipsis next to the document, and do one of the following:
   - Select **Get resource link** if you want to get the link for registered users.
   - Select **Get public resource link** if you want to share the link publicly.
4. When a window with the link to the published model opens, click **Copy**.

After you complete the above steps, the link to a document is copied to your clipboard and you can share it with reviewers.

Providing an easy-to-remember link

When you want to share a Cameo Collaborator document and provide reviewers with an easy-to-remember link, you can rewrite the link to the document by using a document name in it.

To get an easy-to-remember link to a published model

---

1. Get a link to a published model, as described above. The link should look like this *<domain>:<port>/webapp/collaborator/document/<document ID>.*
2. After pasting the link to share it with reviewers, replace the document ID with the name of the published document and add *.CC* at the end of the link.

Example

If you want to rewrite a link to the published model named *Climate control system*, the rewritten link should look like this *<domain>:<port>/webapp /collaborator/document/Climate%20control%20system.CC*.

Character limitations

There are limitations for characters that can be used in a document name if you want to include it in the document link:

- You cannot use slashes (/) and back slashes (\).They are treated as resource separators in a document link.
- You must encode the following characters in the document name (i.e., replace each character with "%" followed by two hexadecimal digits) before using it in a URL:

  ```
  +=@#$%^&<>\{}|[]`;:?,
  ```

- You can use alphanumeric and the following special characters without encoding:

  ```
  $-.+!'()_*~
  ```
