

# Synchronizing users and user groups

To synchronize external users/user groups through the **User application**

1. Go to the **User application**, click the  and choose  **Import users & groups**.
2. Select a LDAP server from which you want to synchronize users and groups.
3. In the search bar, type a username, group name or LDAP query, and press **Enter**. A list of usernames that matches the username or LDAP query will appear.
4. Choose one or more usernames/group names to synchronize by selecting the check box(es).
5. Click **Import**.

New users and groups will be imported. When imported user is new, an external user will be created and the role assignment will be assigned to the user. If the user has been imported before, the existing user information will be updated but the role assignment stays the same.

Upon importing users and groups, you can copy roles and assignments from other users to them. See the section [Copying roles and assignment](#) for more information.
