

Strategic Traceability

Description

The Strategic Traceability (St-Tr) view describes the mapping between the capabilities required by an enterprise and the supporting operational activities. It is important to ensure that the operational activity matches the required capability. With a help of the Strategic Traceability (St-Tr) view you can identify how operational activities can be performed using various available capability elements. The capability to activity mappings may include both situations where activities fully satisfy the desired capability and those where the activity only partially meets the capability requirement.

The intended usage of the Strategic Traceability (St-Tr) view includes:

- Tracing capability requirements to operational activities.
- Capability audit.

Implementation

The Strategic Traceability (St-Tr) view is represented by a [Capabilities to Actual Enduring Tasks Mapping matrix](#) which is an editable Dependency Matrix. The Capabilities are used as row elements and the Operational Activities are used as column elements.
