Working with Resources Taxonomy table

To create a Resources Taxonomy table

- Click the Add New button and select Capability Configuration, Known Resource, Natural Resource, Organization, Person, Post, Resource
 Architecture, Resource Artifact, Resource Mitigation, Responsibility, Security Enclave, Software, System, or Technology. Enter a name and define
 the documentation.
- Click the Add Existing button and in the Select Resource Performer dialog, select the desired Resources. Define the documentation.

You can change the table display mode by choosing one of the following:

- Complete tree
- Compact tree
- List
