

# D1 Master Data

## Description

The D1 Master Data view specifies standard reference data in the deployed space. This includes organizations, locations, facilities, and individual platforms. The D1 view presents all the data as a hierarchy and provides a text definition for each one by displaying the following properties:

- The name used for this element in the architecture.
- Alternative names for this element, for example, if the element is listed in the NATO ontology it may have multiple names.
- A brief description of the element.

## Implementation

The D1 view can be represented using:

- D1 table.

#	Name	Definition	UPDM Type	UML Metatype	Used in Diagrams	Belongs to a View
1	Fixed Wing Aircraft	The Nimrod can fly at high speed to a distance of approximately 800 nautical miles from base and then search for a period of 5 hours. Range can be extended at the expense of search time, or both may be extended by the use of in-flight refueling.	 ResourceArtifact	 Class	 NTV-1	
2	Helicopter	The RAF Sea King helicopters at Boulmer, Chivenor, Leconfield, Lossiemouth, Valley and Wattisham have a maximum endurance of 6 hours. This gives a radius of action of approximately 250 nautical miles from base. This can be extended by refuelling from forward bases, oil platforms or suitably equipped RN ships.	 ResourceArtifact	 Class	 NSV-9  NTV-1	
3	MR Aircraft Instruction		 ResourcePort	 Port	 NSV-8  Maritime Rescue Unit	
4	Rescueing		«»ResourceState	 State	 Aircraft Transition Description	
5	Landed		«»ResourceState	 State	 Aircraft Transition Description	
6	Recovering Victims		«»ResourceState	 State	 Aircraft Transition Description
