

Redefinition

Any inherited part can now be quickly redefined directly in the composite structure diagrams. A new part redefining the original one is created and graphically replaced in the diagram with all ports and connectors remaining in their places.

To redefine an inherited part

1. Right-click a part and choose **Refactor > Redefine To**. The **Select Type** dialog opens.
2. Do one of the following:
 - Type a name, if you want to create a new type.
 - Select one of the existing types.
