- More information about working with templates in Report Wizard

Report Wizard uses templates to generate reports. Each report file format depends on the type of template files. The type of template files that Report Wizard supports includes plain text, RTF, HTML, Office Open XML (ISO/IEC 29500:2008), OpenDocument format (ISO/IEC 26300), and XML template (DocBook or FO).

Report Wizard provides predefined templates such as Use Case, Model Extension, Data Dictionary, IEEE 1233, Class Specification Diagram, Business Process Diagram, and Web Publisher templates. The report template management pane in the **Report Wizard** dialog lists all of the report templates from which you can select to manage or generate your report.

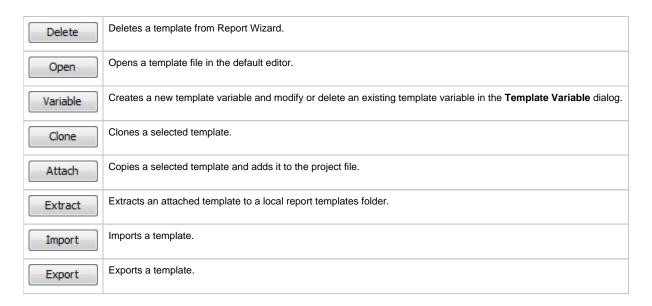

Template options, which are highlighted in orange, are available to choose from in the Report Wizard dialog.

Using the Template Management Pane

In this pane, you can create a new template, or use an existing one. The following table displays the buttons from which you can choose while working with your template. Additionally, the control buttons in the lower part of the dialog Back, Next >, and Generate help you cancel an action, go to the next step, and generate a report.

Button	Function
New	Opens the New Template dialog through which you can create a new template.
Edit	Edits a template and saves it in Report Wizard.

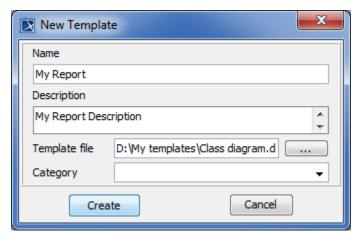

Working with a Template

The following instructions illustrate how to use each button in the Report Wizard to create, select, and manage a template.

- 4. Click OK

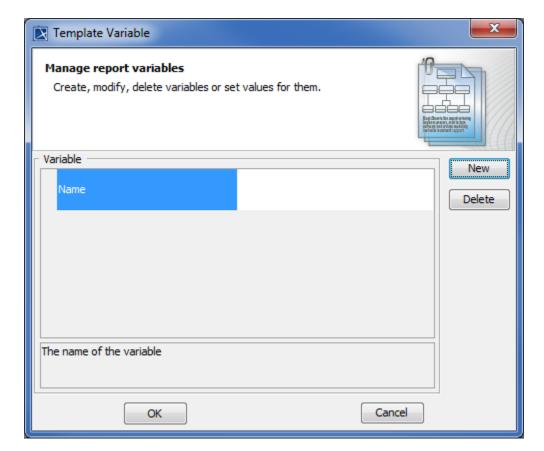

The Message dialog of successful export.

To open a template file in the default editor

• In the Report Wizard dialog, select a template and click Open. The template file will open in the default editor.

Working with a template variable

A template contains variables and their values. You can create a new template variable, and modify or delete an existing template variable in the **Template Variable** dialog. You cannot modify the variables of a built-in template. You can only create or modify a template variable of a user-created template.

The Template Variable dialog.

The **Template Variable** dialog, contains the following:

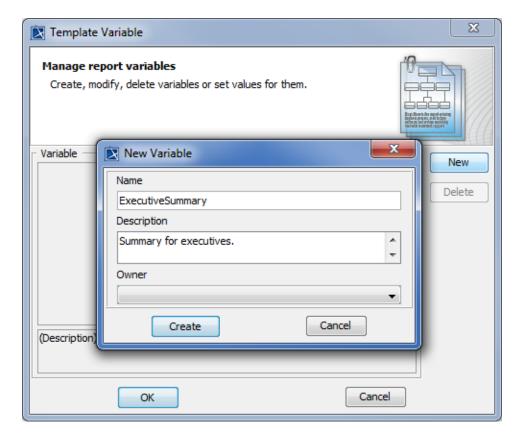

• Variable pane: This pane consists of a table in which the first column is the variable name, the second column is the variable value, and also includes a report description field. You can view and directly edit the value of a selected variable in the second column.

The following instructions explain how to manage the variables of a template.

To create a template variable

- 1. Select a template in the Report Wizard dialog and click Variable. The Template Variable dialog will open.

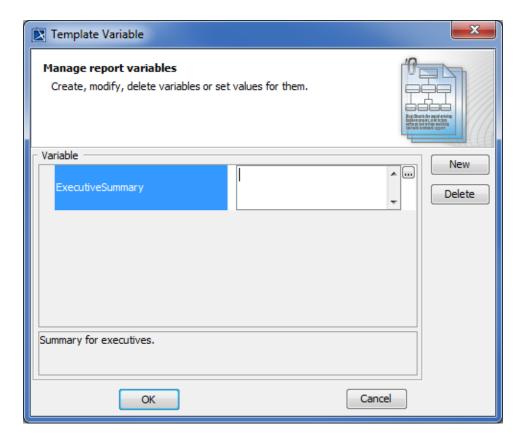

Creating a new variable in the New Variable dialog.

- 3. Enter the variable name (no space between characters) and description.
- 4. Select an owner for this new variable from the Owner drop-down list (optional).
- 5. Click Create ... You will see the newly-created variable's name and value in the **Variable** pane.
- 6. In the Template Variables dialog, click OK

To modify a variable value in the Template Variable dialog

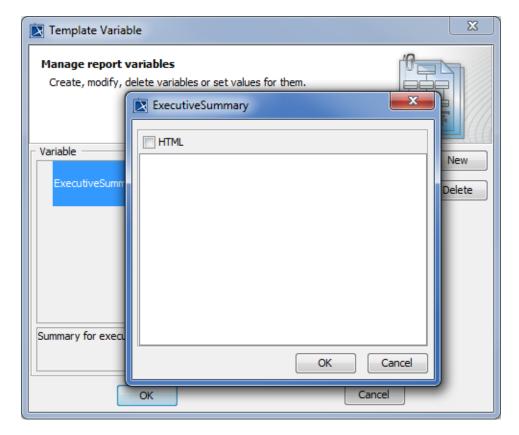

- 1. Select a template in the **Report Wizard** dialog, and click **Variable** to open the **Template Variable** dialog.
- 2. Double-click the **Variable** value column and modify the value in the column.

Editing a variable value in the Template Variable dialog.

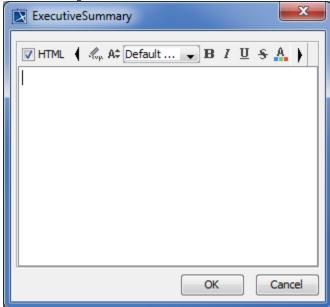

To modify a value in the Template Variable value dialog

1. Double-click the **Variable** value column in the **Variable** pane in the **Template Variable** dialog, and click the button. The **Variable** value dialog will open.

Editing a variable value in the Variable value dialog.

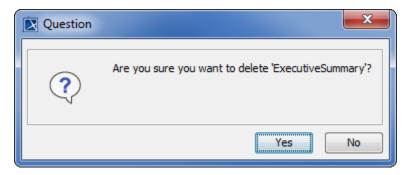

2. To modify the variable value, you can enter the value of a report variable either in plain text or HTML by selecting the HTML check box in the **Vari able Value** dialog.

Entering a report variable value in HTML.

- 3. Click OK
- 4. When you finish modifying variables and their values in the **Template Variable** dialog, click either to confirm the changes or to discard them.

- Select a variable in the **Template Variable** dialog and click Delete
 The **Question** dialog will appear prompting you to confirm before deleting the selected variable.
- 2. Click Yes to delete the selected variable.

Deleting a variable.

Glossary

Use case

A a kind of behavior classifier that specifies a complete unit of useful functionality performed by one or more subjects to which the use case applies in collaboration with one or more actors. It also, for complete use cases, yields an observable result that is of some value to those actors or each subject. Use cases allow you to capture the requirements of systems under design or consideration, describe functionality provided by those systems, and determine the requirements those systems pose on their environment.

· Business process diagram

A road map for implementation. It outlines the expected outcome, and provides something concrete from which to build.
