

Disabling inbound network activity

To disable inbound network activity

1. Go to *<modeling tool installation directory>bin* and open the properties file, e.g., *magicdraw.properties*.
2. In the `JAVA_ARGS` line, add the following argument:

```
-DDISABLEINBOUNDCON=true
```

3. Save and close the file.

If you disable inbound network activity, double-clicking a project file (.mdzip) opens the project in a new modeling tool window.
