

# Using Directive Mapping

In MagicDraw version 12.1, the C# Using directive is mapped to the model as usage dependency with «C#Using» stereotype.

## C# Using Namespace

The following example shows the mapping of C# Using Namespace. The usage dependency for C# Using namespace declaration that is not in the namespace will be created under File View component.

**Example**

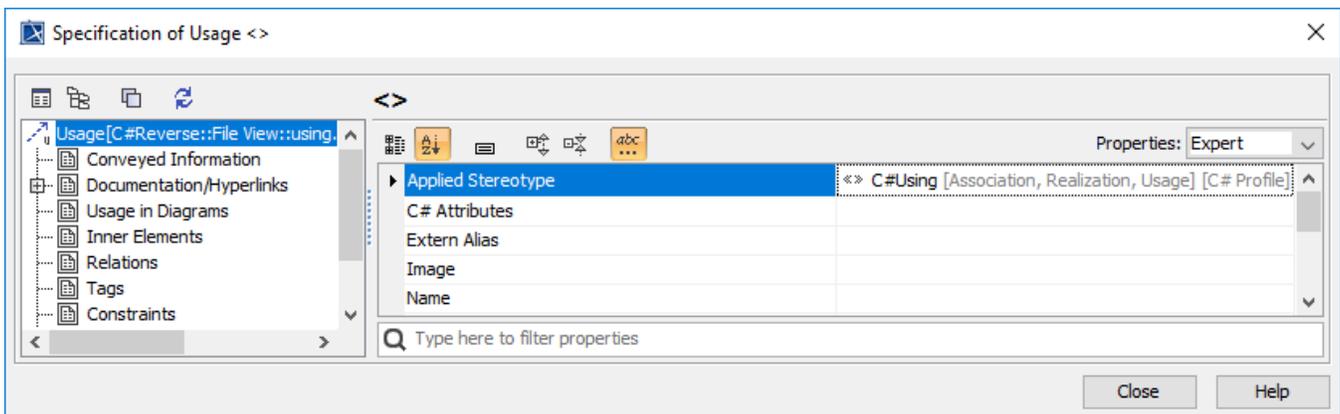

Code:

```
using System;
using System.Collections.Generic;
using System.Text;
namespace n0
{
class using1 {}
}
```

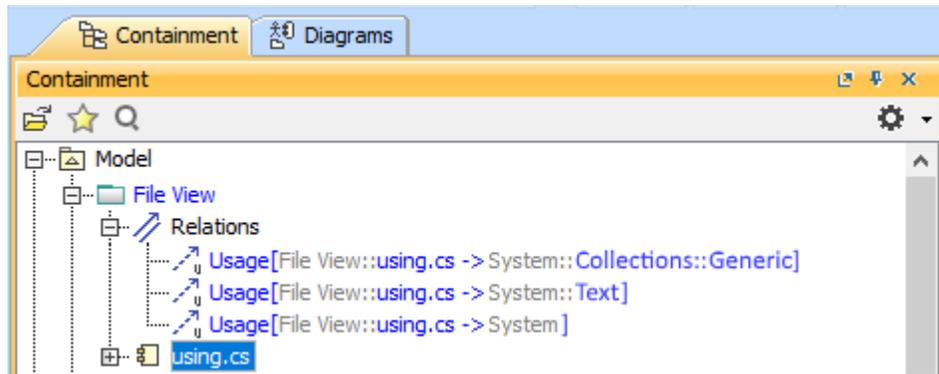

Reversed UML model:

The diagram illustrates a component named 'using.cs' (highlighted in yellow) with three usage dependencies (dashed arrows) to packages: 'System', 'Text', and 'Generic'. Each dependency is labeled with the stereotype «C#Using».

Open usage dependency specification apply «C#Using» stereotype. For using namespace, leave the name empty:

Applying «C#Using» stereotype

Relations in the containment tree

## C# Using alias

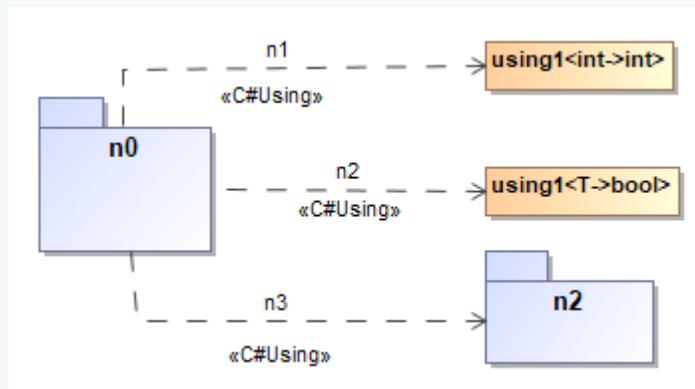

The following example shows the mapping of C# Using alias. The usage dependency for C# Using alias declared in the namespace will be created under that namespace.

### Example

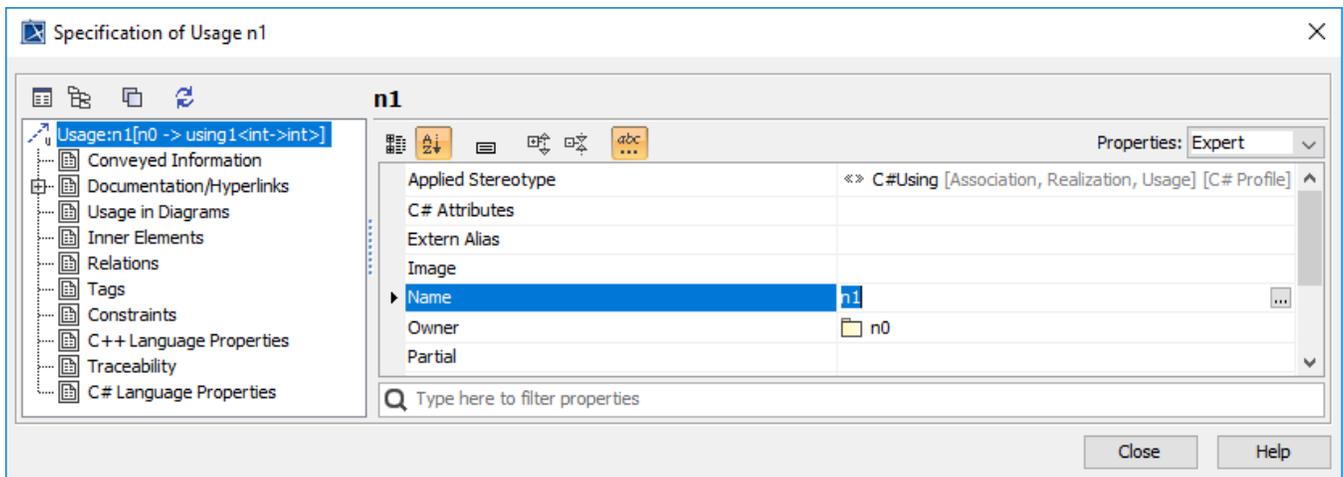

Code:

```
namespace n0{ using n1 = n1.using1<int>;
using n2 = n1.n2.using1<bool>;
using n3 = n1.n2;
class using1 : n2 {
n1 a; n2 b;
n3.using1<float> c; }
}namespace
n1{ namespace n2
{ class using1<T> { } }
class using1<T> { }}
```

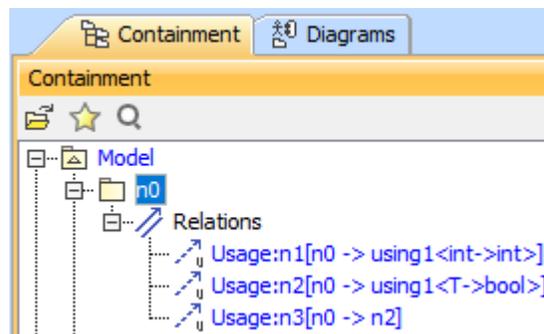

Reversed UML model:

Open usage dependency specification apply «C#Using» stereotype. For using alias, enter the alias name:

Applying «C#Using» stereotype

Relations in the containment tree

## C# Partial feature

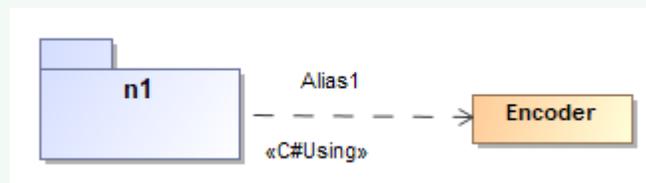

For mapping C# Using directive in the C# Partial feature, add file component name into **Partial Tag** value of usage link specification.

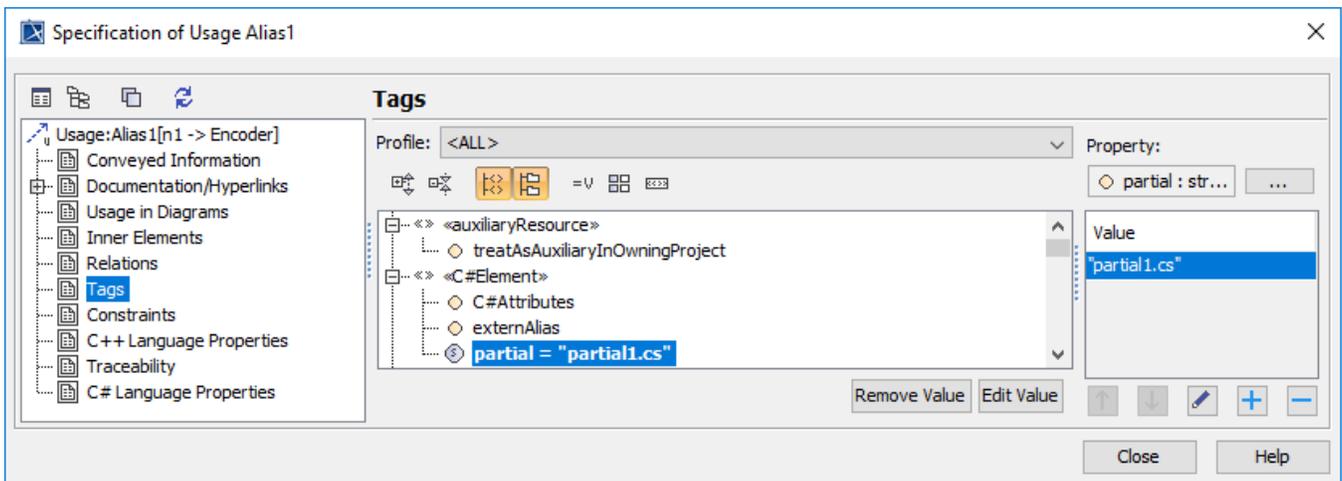

### Example

Code for creating value partial1.cs

```
//partial1.cs
namespace n1 {
using LL =
System.Text.Encoder;
}
partial class using1
{
LL a;
}
```

Reversed UML model:

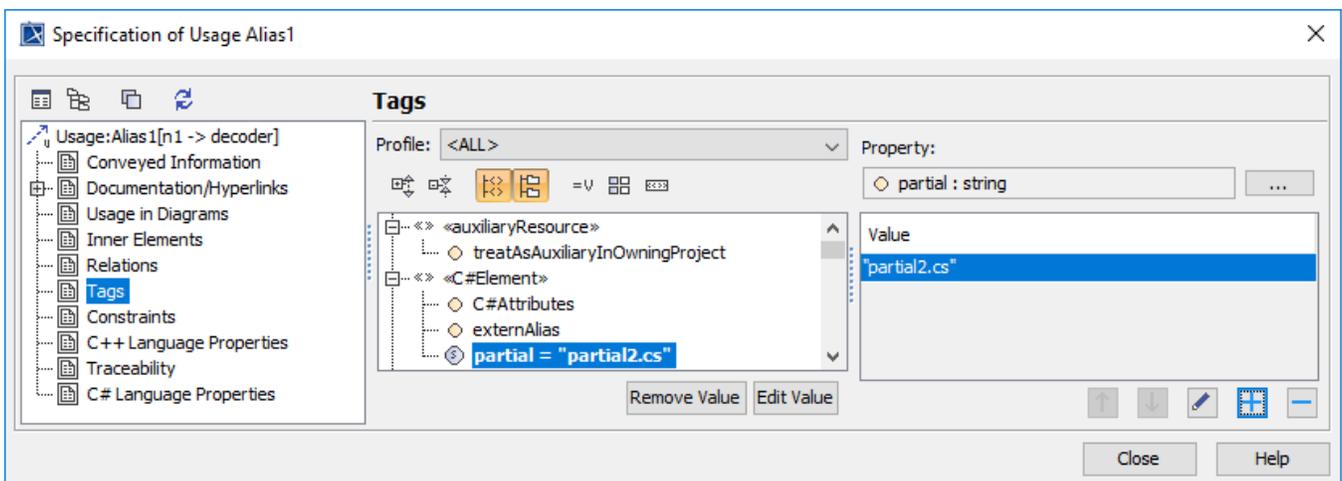

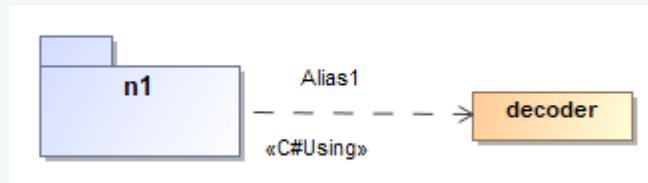

Partial Tag with value partial1.cs

### Example

Code for creating value partial2.cs

```
//partial2.cs
namespace n1 {
using LL =
System.Text.Decoder;
}
partial class using1
{
LL b;
}
```

Reversed UML model:

Partial Tag with value partial1.cs
