

# Static Class

Static classes are classes that are not intended to be instantiated and which contain only static members. When a class declaration includes a static modifier, the class being declared is said to be a static class.

When a class declaration includes a static modifier, the class being declared is said to be a static class.

## Example

Code:

```
static class A
{
    ...
}
```

C# Language Properties to create static class:
