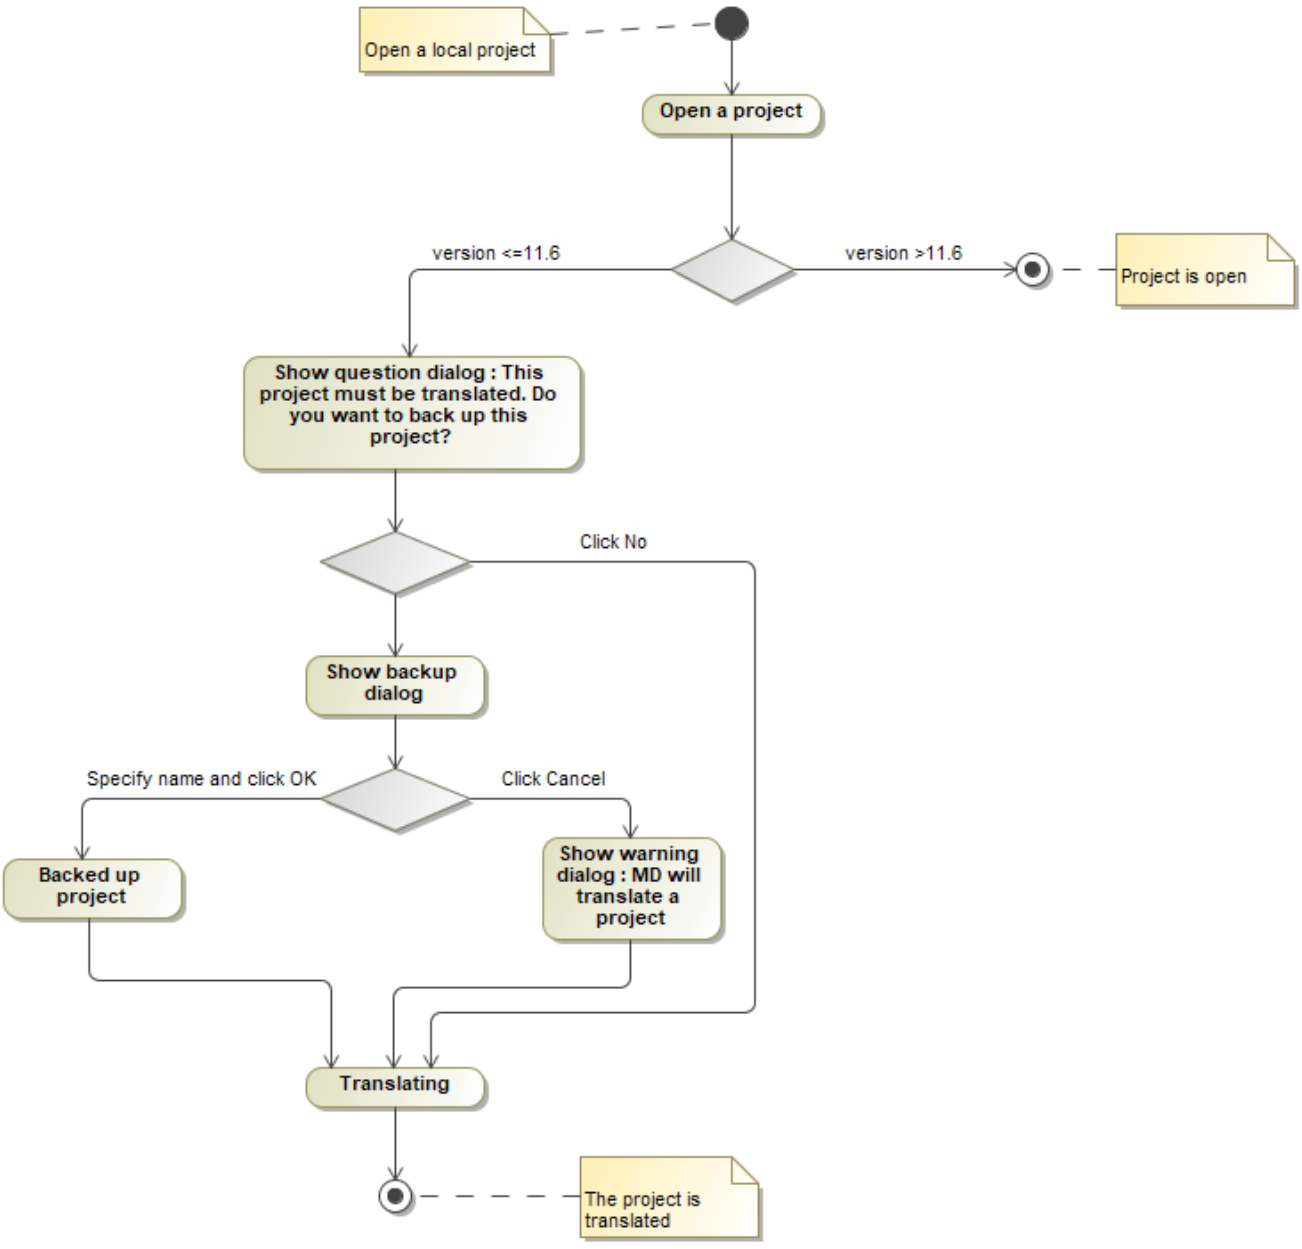
Migration from old C# project version

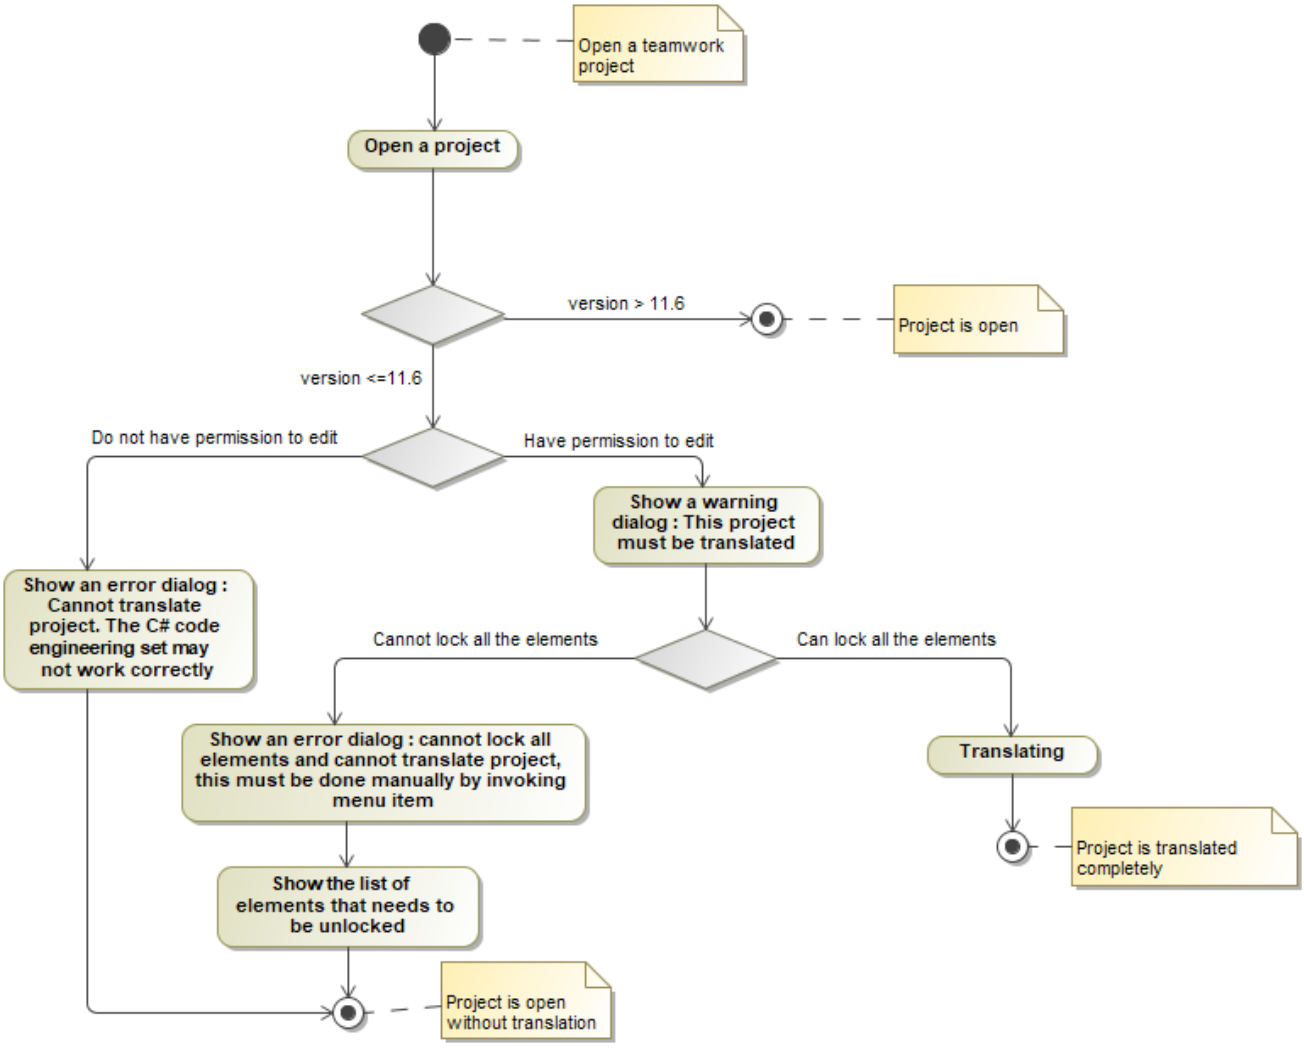
Projects created with MagicDraw version 11.6 or earlier and using C# programming language properties, profiles, or having type modifiers must be converted with a later version of MagicDraw.

You can see the conversion process in the following diagrams.

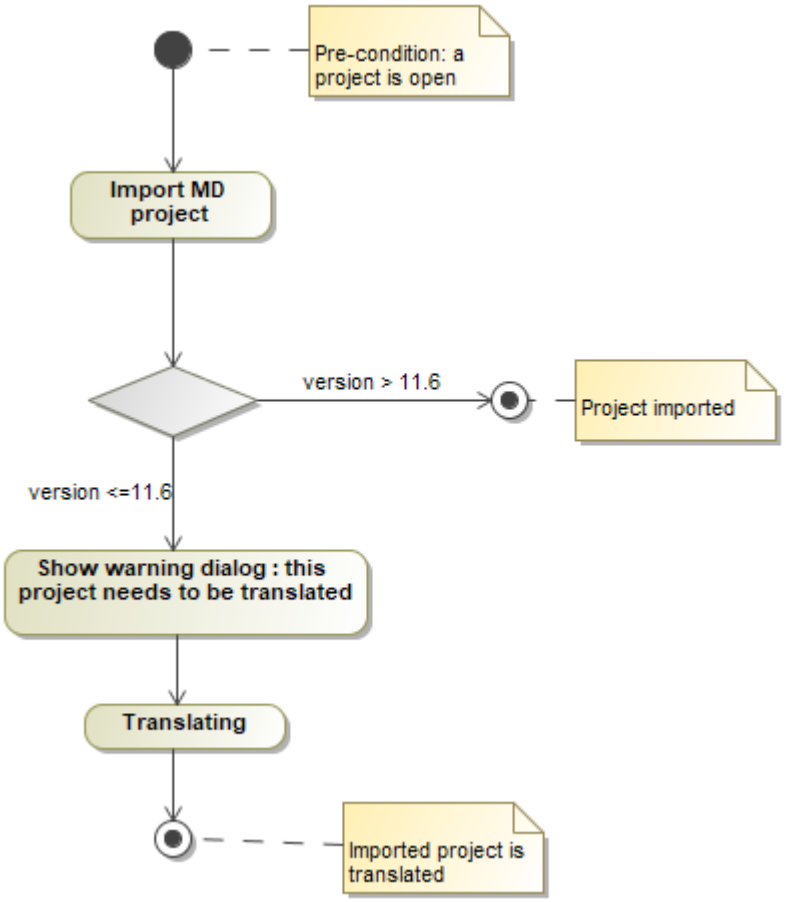
Migrate local project



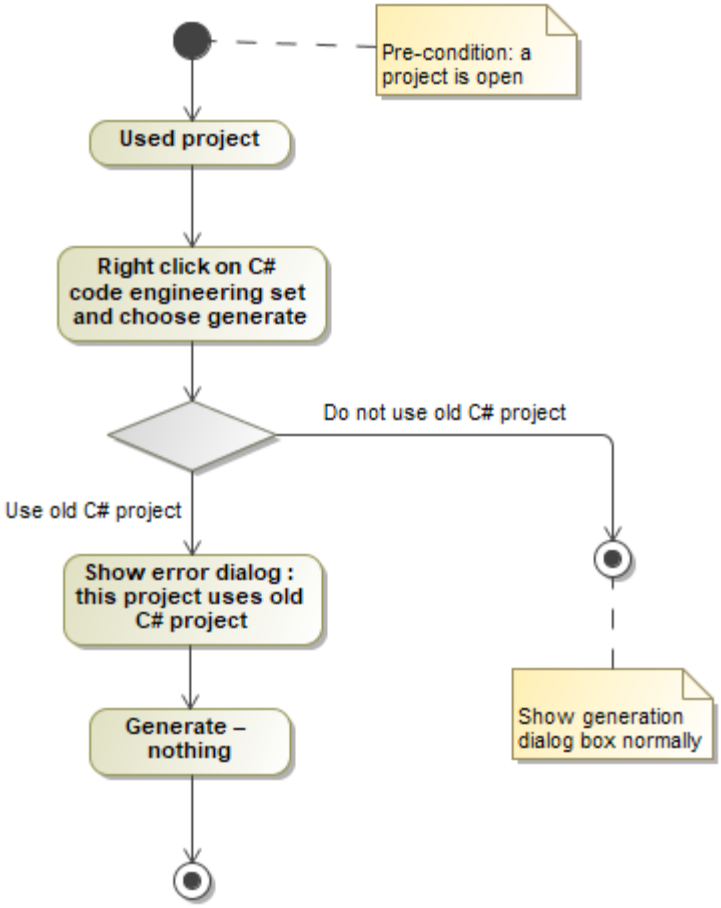
Migrate Teamwork project



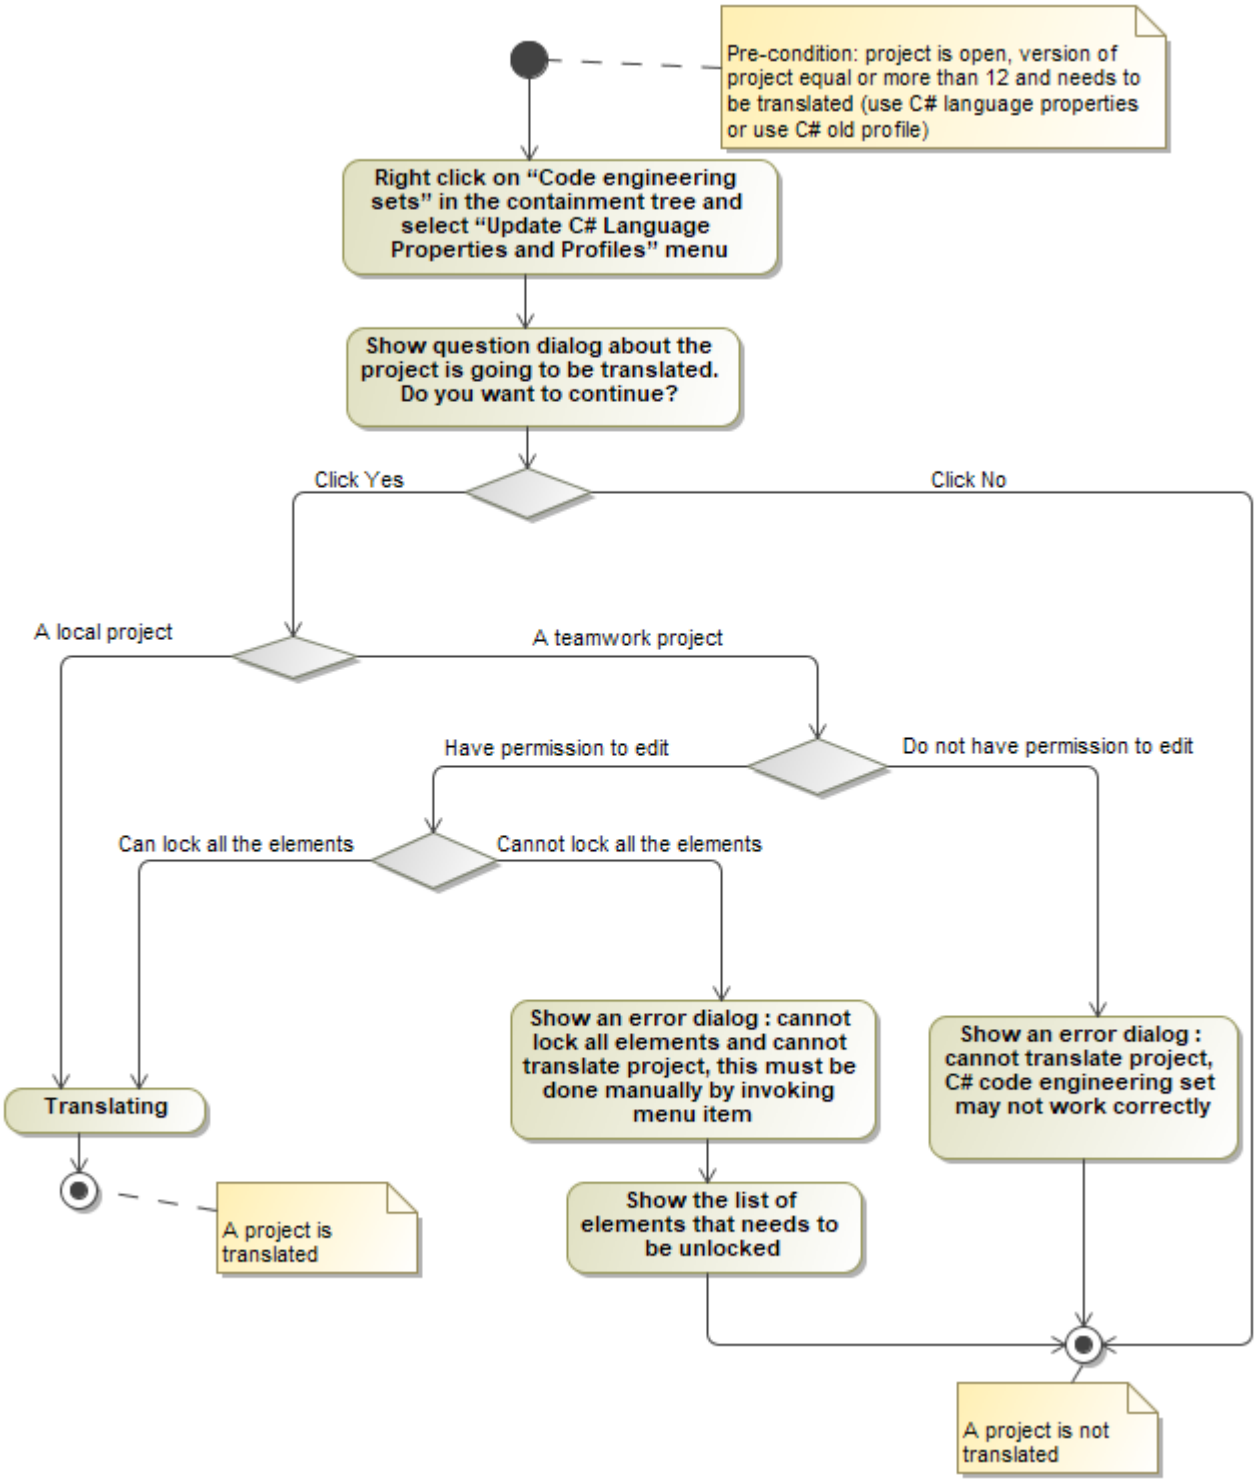
Import and migrate MagicDraw Project



Used Project



Update C# Language Properties and Profiles



Pre-condition: project is open, version of project equal or more than 12 and needs to be translated (use C# language properties or use C# old profile)
Right click on "Code engineering sets" in the containment tree and select "Update C# Language Properties and Profiles" menu
Show question dialog about the project is going to be translated. Do you want to continue?
Click Yes
Click No
A local project
A teamwork project
Have permission to edit
Do not have permission to edit
Can lock all the elements
Cannot lock all the elements
Translating
A project is translated
Show an error dialog : cannot lock all elements and cannot translate project, this must be done manually by invoking menu item
Show the list of elements that needs to be unlocked
Show an error dialog : cannot translate project, C# code engineering set may not work correctly
A project is not translated
