

Include

Maps to a UML Component with the stereotype XSDinclude. This component must be added into an xsd file component.

- annotation maps to the UML Component documentation
- schemaLocation maps to the UML Component name.

include XML representation summary

```
<include
  id = ID
  schemaLocation = anyURI
  {any attributes with non-schema namespace...}>
  Content: (annotation?)
</include>
```

include UML model example.

include XML code sample

```
<xs:schema xmlns:nm = "http://nomagic.com" xmlns:xs = "http://www.w3.org/2001/XMLSchema" targetNamespace = "http://nomagic.com">
  <xs:include schemaLocation = "http://nomagic.com/schema.xsd" />
</xs:schema>
```
